

□ CLINIC — All-on-Full™ UK

Our Clinic

All-on-Full™ UK is the first centre in the United Kingdom dedicated exclusively to **basal-bone full-arch implantology**. We perform **complete arch reconstruction in 2 hours**, with **immediate loading, no bone grafts, no sinus lifts, and no zygomatic implants**.

Our clinic is designed around one principle: **full-arch implantology must be complete, stable, and biomechanically correct**.

Our Surgical Philosophy

We do not follow the traditional UK approach based on alveolar bone, grafting, and long prostheses. We use **basal bone**, the permanent cortical structure that never resorbs and supports real molars and full 14-tooth arches.

Every surgery is built on:

- Vertical force vectors
- Masseter-driven biomechanics
- Short circular bridges
- Zero cantilevers
- Zero fake gum

This is the foundation of All-on-Full™.

Why Our Clinic Is Different

Most UK centres still rely on:

- Alveolar bone

- Sinus lifts
- Bone grafts
- Zygomatic implants
- All-on-4 with only 4 implants in the front
- Oblique forces that destabilize the prosthesis

We do not.

We anchor implants in **basal bone**, allowing:

- Real molars
- Full chewing power
- Immediate loading
- Complete arches
- Long-term stability

2-Hour Full-Arch Procedure

Our protocol allows patients to receive:

- Full arch
- Full function
- Full aesthetics
- Full stability

In **just 2 hours**.

No waiting. No temporary compromises. No multi-stage surgeries.

Immediate Loading

Every patient leaves the clinic with:

- Fixed teeth
- Full chewing ability

- Natural occlusion
- Vertical force distribution

Immediate loading is not an option — it is the standard.

No Grafts, No Sinus Lift, No Zygomatic

Because we use basal bone, we eliminate:

- Bone grafts
- Sinus lifts
- Zygomatic implants
- Long healing times
- Surgical complications

Basal bone makes these procedures unnecessary.

Our Commitment

We do not tell patients they “have no bone.” We do not use fake gum. We do not accept cantilevers. We do not compromise on biomechanics.

We deliver the **complete version** of full-arch implantology: **All-on-Full™**.
